Contents

CIT168_Labeling_Templates This directory contains the 8 pairs of T1w and T2w validation templates that were delineated by each observer during the construction of the probabilistic atlas. The six digit numbers in each filename (eg 059780) are unique identifiers for each randomly selected subsample of 84 subjects from the original 168 subjects used to generate each validation template. All images are in the same 700 um isotropic CIT168 native space.

CIT168_Unrestricted_Demographics.tsv A tab-separated value file with the HCP identifiers, sex and age-range for all 168 subjects used to generate the CIT168 atlas templates.
